AC 20-149A FIS-B

#	Commenter	Page & Para. No.	Comment	Reason for Comment	Suggested Change	Comment Resolution
1.	Garmin	Page 8, Paragraph 11(c)	<p>The paragraph states, “FIS-B information is meant to enhance flight planning only. It lacks sufficient resolution and updating necessary for tactical maneuvering. For example, NEXRAD images are at a minimum 10 minutes old when received.”</p> <p>The final sentence can be confusing to the pilot, who may not be familiar with the methods used to determine age or currency of a product like NEXRAD.</p>	The final sentence does not add value to the statement.	Remove the sentence “For example, NEXRAD images are at a minimum 10 minutes old when received.”	Accepted – Deleted the sentence as recommended
2.	Cessna Aircraft Company	p.6, Para 9.b	While we realize that TSO-179a is the only released reference at present; please consider an update when the output of RTCA SC-225 is available for small and medium sized lithium batteries.		Update lithium battery reference when available	Acknowledge – Will monitor the status of TSO-C179a for future inclusion in this AC
